Researchers can access around **250 titles with a specific focus on the environment and sustainability** (including 100 scholarly journals with ongoing full text) through **ProQuest Environmental Science Journals**. The collection features over 1600 periodicals in total, including many scientific journals and periodicals covering related subject areas. These titles are also available as part of **ProQuest Central**.

Over **80 titles in ABI/INFORM** relate to the environment and sustainability, including general environmental content and publications that inform environmentally sustainable business decisions. These include over **30 scholarly journals with ongoing full text** such as *Environment* (Heldref), *Environment and Development Economics* (Cambridge University Press) and *Environmental Science and Pollution Research International* (Springer).

The **ProQuest subject thesaurus** accessed from the Advanced Search Page allows users to find articles and reports relevant to a subject such as **sustainable development** (over 20,000 results) which can be further filtered using fields such as source type and location.

- **Key trade publications**: *Business and the Environment, Enviromation, Global Warming Focus* and many more

- **Key scholarly journals**: *Environment, Environment and Development Economics, Environmental Science and Pollution Research International*, and others

- **Non-periodical content highlights**: Reports and working papers from Organisation for Economic Cooperation and Development, including *OECD Environment Working Papers*.
