ABI/INFORM includes over 30 reports on the mining industry from Business Monitor International, plus a further 20 titles, many with ongoing full text, such as Engineering and Mining Journal and Mining & Minerals. Most of these titles are also included in the subset ABI/INFORM Trade and Industry. Some additional titles are available as part of ProQuest Central, which offers in total around 70 titles on mining.

The reports from Business Monitor International provide statistics, analysis and forecasts on countries around the world with significant mining industries, from Angola to the United States. They are issued annually for this industry.

The subject thesaurus available from the Advanced Search Page allows users to find articles and reports on mining industry, or narrower terms such as coal mining and associated terms including mines across all content in ABI/INFORM (and/or other subscribed databases). This opens up an extensive range of material from beyond the relatively few titles with a specific subject focus on this area, returning relevant results from other scholarly and trade journals, as well as wire feeds and newspapers. These can be further refined using search and filter options such as source type, location, and company/organization.

- **Key trade publications:** Canadian Mining Journal, Engineering and Mining Journal, Mining & Minerals and many more

- **Key scholarly journals:** Réalités Industrielles

- **Non-periodical content highlights:** reports on the global mining industry from Business Monitor International
